

TECH ASSESSMENT FOR DATA SCIENCE LEAD

Presented by Light Low
2022-04-06

TABLE OF CONTENTS

01 TYPE OF RECOMMENDATION SYSTEM

02 MODEL PRESENTATION

03 CHALLENGES & LIMITATIONS

04 IMPROVEMENTS

TYPE OF RECOMMENDATION SYSTEM

Traditional Recommender System:

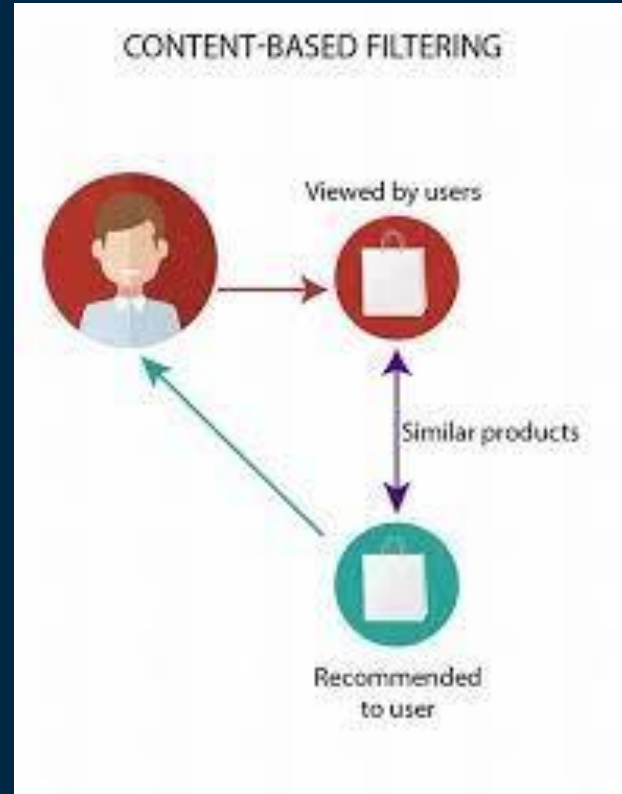

1. Content-Based
2. Collaborative Filtering
3. Hybrid Recommender System

Modern Recommender System:

1. Demographic-based approach
2. Knowledge-based approach

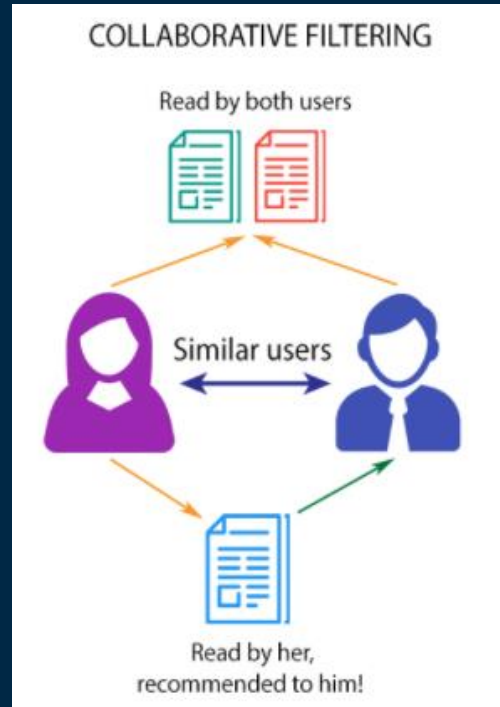

TYPE OF RECOMMENDATION SYSTEM

↳ CONTENT-BASED

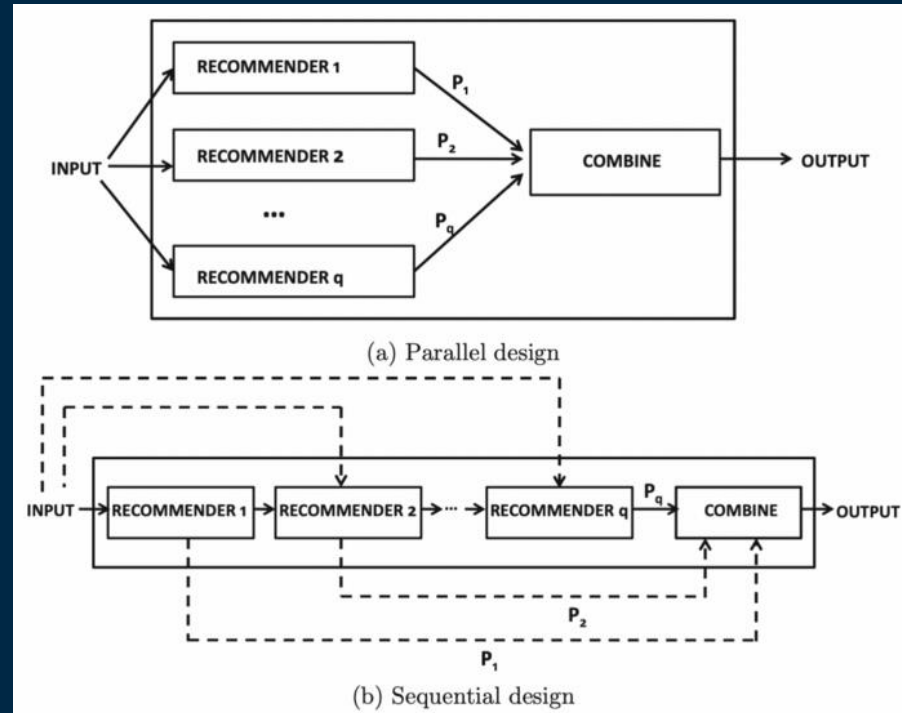

TYPE OF RECOMMENDATION SYSTEM

↳ COLLABORATIVE FILTERING

TYPE OF RECOMMENDATION SYSTEM

↳ Hybrid Recommender System

TYPE OF RECOMMENDATION SYSTEM

↳ DEMOGRAPHIC-BASED APPROACH

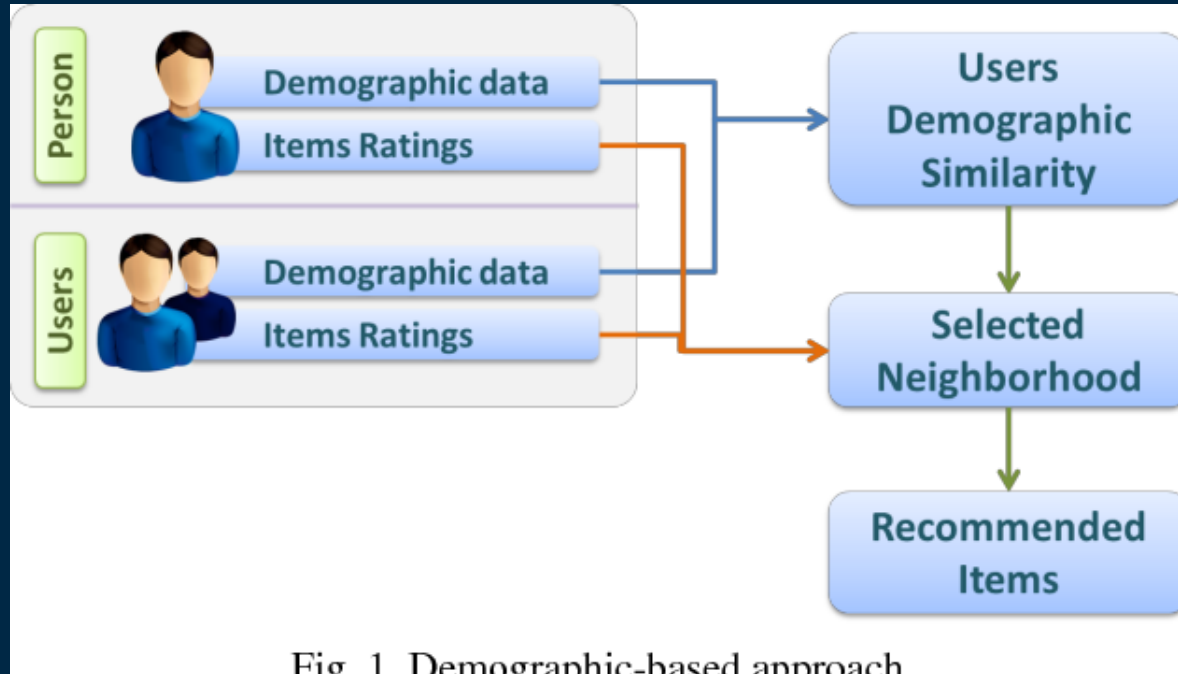

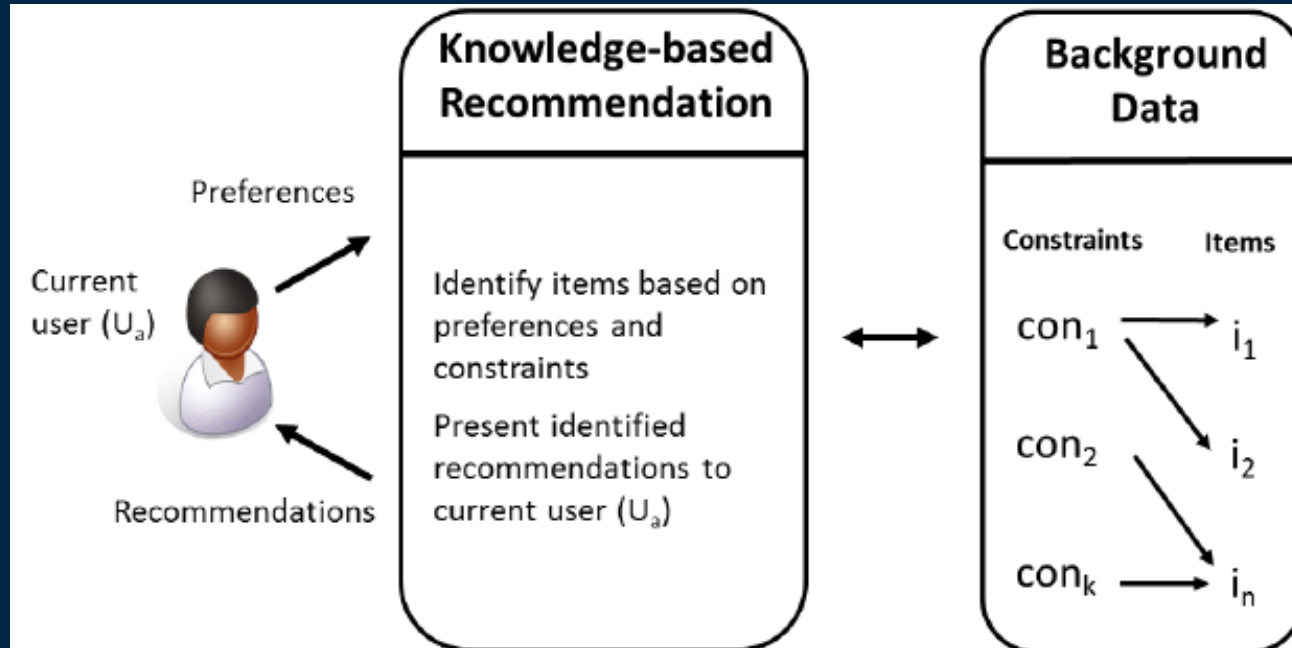

Fig. 1. Demographic-based approach.

TYPE OF RECOMMENDATION SYSTEM

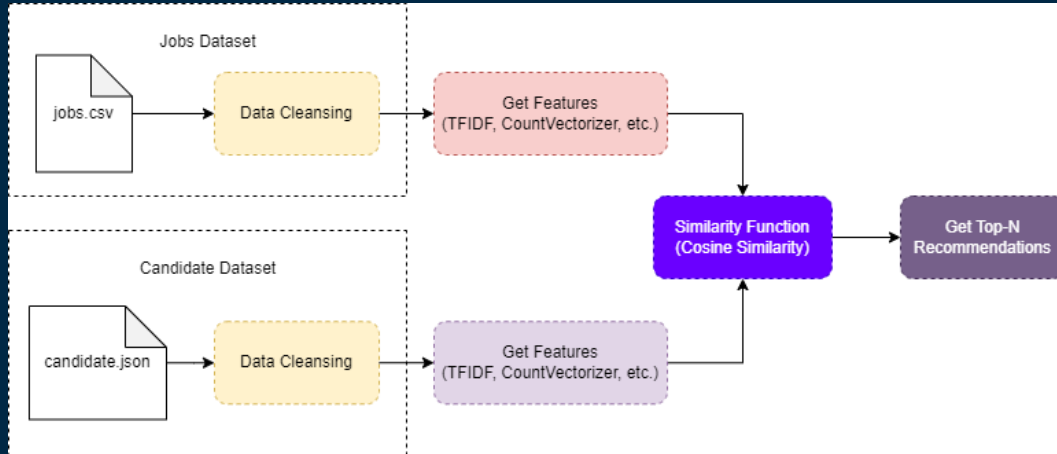

↳ KNOWLEDGE-BASED APPROACH

MODEL PRESENTATION

Development Process:

1. Data Cleansing, Preprocess, Manipulate (candidate & job)
2. Model Development:
 - i. TFIDF
 - ii. Count Vectorizer
 - iii. Spacy
 - iv. KNN

CHALLENGES & LIMITATION

1. Data Cleansing:
To transform unstructured format in candidate data (Sections) into structured 2D vectors formatting.
2. Limitation by the volume of dataset
3. Limitation by the variation of dataset

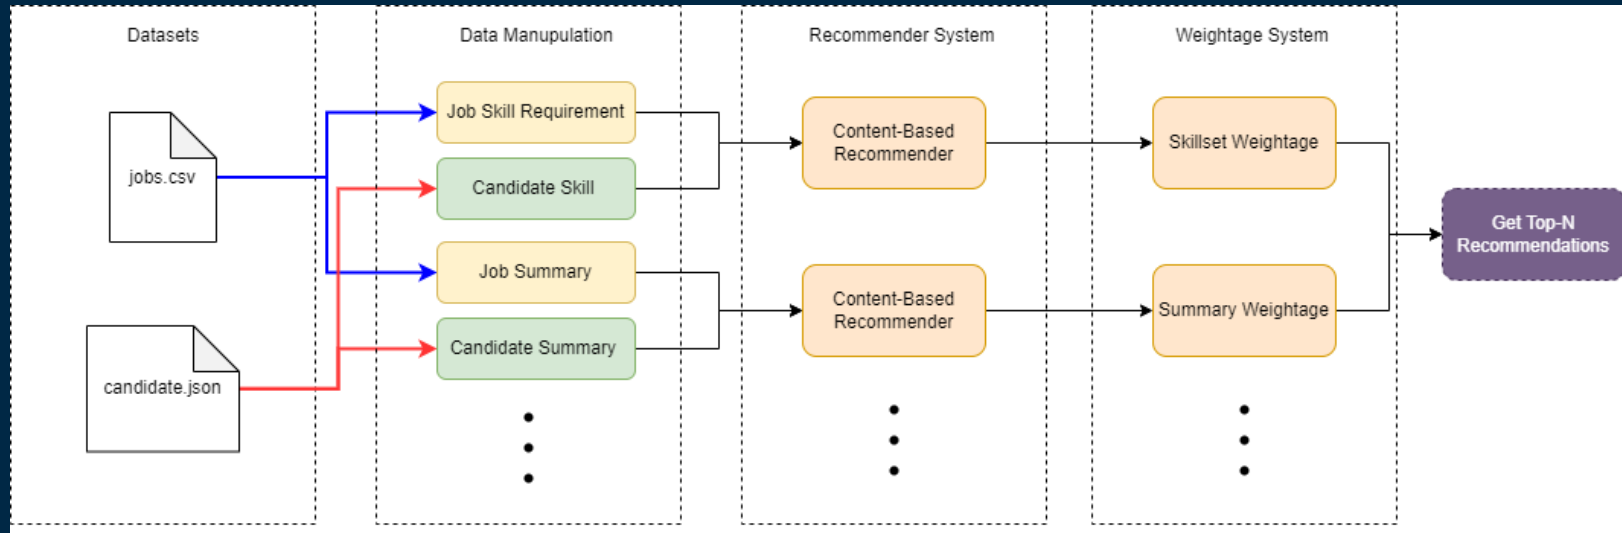

IMPROVEMENTS

1. Create related stop words under internal database to filter un-useful words.

```

IMPROVEMENTS

2. Segregate different user sections and features into separate content-based, combine it again by weightage set by business user (Hybrid Recommender with multiple content-based system).

IMPROVEMENTS

3. With enough data, can implement Hybrid Recommender System or Demographic-based approach.
 - i. Adding implicit data example: user clicks, watched post, duration on screen, etc. We can implement Hybrid Recommender System by combining collaborative and content-based filtering system.
 - ii. use Demographic-based approach to avoid cold start problem.

THANK YOU
FOR YOUR TIME AND PATIENCE
